

SMARTER & FASTER

fds 9200, 6000 & 4600 Series

The Professional's choice – endorsed by the Baltimore Ravens Don Follett, Director of Fields & Grounds.

- Sports Fields
- Golf Courses
- Horse & Race Tracks
- Baseball Fields
- Parks & Campgrounds
- Landscape Construction

SYNTHETIC TURF

Quickly revives old & compacted synthetic turf to get the spring back into the rubber-crumb top dressing in one easy pass.

- approved by synthetic turf manufacturers/installers.
- superior to other spring tine aerators.
- soft spring tines do not pull up the fibers like other stiff spring machines.
- the large number of tines provides superior coverage & compaction relief; and
- keep fibers standing upright - your turf - your reputation!

NATURAL TURF

- high-speed dethatching after winter kill and repair flood impact zones - efficient & effective turf preparation for overseeding; will ensure a healthy stand of turf.
- less intrusive alternative to verti-cutting - variable tension settings for use on different component areas (end zones, central play areas) on football fields.
- evenly spreads topdressing & sand and/or rubber infill used in synthetic athletic fields; and
- increased thatch removal for healthier turf - the fds tines relieve surface compaction to help water, air & fertilizer penetrate the root zone quickly.

FEATURES

- **FREE-FLOATING SECTIONS** Articulate to conform to undulations and steep slopes. Easy monitoring & tensioning adjustment.
- **SPRING-LOADED TINES** Long-lasting hardened tines are more durable & more responsive to aggressive turf conditions & better withstand contact with obstructions (irrigation heads). More effective in preventing and controlling disease. Safety cables aid in trouble shooting - fast to install.
- **VARIABLE TENSION SETTINGS** for dethatching from light to aggressive and smoothing of rubber and sand infill.
- **MAGNETIC SWEEP** Provide a clean & safe environment for athletes. Attach Wood Bay's magnetic sweep to remove sharp, dangerous ferrous metal hidden in turf.
- **TURF BROOM** Smooth synthetic and natural turf to perfection.

WHAT THE EXPERTS SAY!

“It's just what the doctor ordered. The fds spring tines get down into the artificial grass fibers and bring the sand & rubber infill back to the top better than any tool I have used.”

*Don Follett, Director of Fields & Grounds,
Baltimore Ravens Football Team*

SUPERIOR TURF MAINTENANCE
EQUIPMENT... ENGINEERED
FOR PROFESSIONALS

SPECIFICATIONS

TOW-BEHIND AERATOR COMPATIBLE WITH MOST ALL-TERRAIN QUADS

DIMENSIONS

- Operating width 92 - 46" (234 - 117cm).
- Treads lightly on the softest turf conditions.

TINES & TIRES

- 256 - 16" (40cm) spring steel music wire (ASTM A 288) tines.
- 2 - 13.0 x 6.5 - 4 ply tires.

SAFETY

- Quick install transportation lock for easy access to and from athletic fields/golf course.
- Built-in height adjustment ratchet for accurate and high performance.

ATTACHMENTS

- Magnetic attachment for athlete safety.
- Dragmat/Broom to evenly level natural and synthetic surfaced fields.

fds Sport carriage

- Quick change carrier from a trouble-free fds three-point hitch to a sport quad transport option.
